Assignment : 10

Title : Write a program to execute User authentication using passkey hash

Name of Student: Shaikh Joya Imran
Class: IT1 **PRN No:** B25IT1066 **Roll No:** SI166 **Batch:** B

Program :

```
import hashlib
import getpass

# Store username and hashed passkey
username = "admin"
passkey = "1234"

# Generate hash of the passkey
stored_hash = hashlib.sha256(passkey.encode()).hexdigest()

# User authentication
print("User Authentication System")

user = input("Enter username: ")
password = getpass.getpass("Enter passkey: ")

# Generate hash of entered passkey
entered_hash = hashlib.sha256(password.encode()).hexdigest()

# Verify username and passkey hash
if user == username and entered_hash == stored_hash:
 print("Authentication Successful!")
 print("Welcome,", user)
else:
 print("Authentication Failed!")
```

```
print("Invalid username or passkey.")
```

Output :

Case 1:

Passkey = 1234

```
User Authentication System
Enter username: admin
Enter passkey:
Authentication Successful!
Welcome, admin
```

Case 2:

Wrong passkey and username

```
User Authentication System
Enter username: JOYA
Enter passkey:
Authentication Failed!
Invalid username or passkey.
```
